Dawood Public School  
Course Outline 2016-2017  
Class XI  
Math

Books:

Addendum

Introduction

This syllabus provides a comprehensive set of progressive learning objectives for mathematics. The objectives detail what the learner should know or what they should be able to do in each year of education. The learning objectives provide a structure for teaching and learning and a reference against which learners' ability and understanding can be checked.

This syllabus designed to promote continuity, coherence and progression within the study of Mathematics. The syllabus builds on the knowledge, understanding and skills developed within the Key Stage of Study for Mathematics.

This syllabus has been designed to meet the requirements of the GCSE regulations.

Cambridge O Level Mathematics (Syllabus D)

Syllabus Code 4024 Assessment:

All candidates take two papers.

Each paper may contain questions on any part of the syllabus and questions will not necessarily be restricted to a single topic.

**Paper 1** 2 hours

Paper 1 has approximately 25 short answer questions.

Candidates should show all working in the spaces provided on the question paper. Omission of essential working will result in loss of marks.

No calculators are allowed for this paper.

80 marks weighted at 50% of the total

**Paper 2** 2 hours 30 minutes

Paper 2 has structured questions across two sections.

Section A (52 marks): approximately six questions. Candidates should answer all questions.

Section B (48 marks): five questions. Candidates should answer four.

Electronic calculators may be used.

Candidates should show all working in the spaces provided on the question paper. Omission of essential working will result in loss of marks.

100 marks weighted at 50% of the total
**Assessment at A Glance**

Calculating aids:

<table>
<thead>
<tr>
<th>Paper 1 – the use of all calculating aids is prohibited.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper 2 – all candidates should have a silent electronic calculator. A scientific calculator with trigonometric functions is strongly recommended.</td>
</tr>
</tbody>
</table>

Unless stated otherwise within an individual question, three figure accuracy will be required. This means that four figure accuracy should be shown throughout the working, including cases where answers are used in subsequent parts of the question. Premature approximation will be penalised, where appropriate.

In Paper 2, candidates with suitable calculators are encouraged to use the value of $\pi$ from their calculators.

The value of $\pi$ will be given as 3.142 to 3 decimal places for use by other candidates. This value will be given on the front page of the question paper only.

**Units**

SI units will be used in questions involving mass and measures: the use of the centimetre will continue. Both the 12-hour clock and the 24-hour clock may be used for quoting times of the day. In the 24-hour clock, for example, 3.15 a.m. will be denoted by 03 15; 3.15 p.m. by 15 15, noon by 12 00 and midnight by 24 00.

Candidates will be expected to be familiar with the solidus notation for the expression of compound units, e.g. 5 cm/s for 5 centimetres per second, 13.6 g/cm$^3$ for 13.6 grams per cubic centimetre.

**Mathematical Instruments**

Apart from the usual mathematical instruments, candidates may use flexi curves in this examination.

**Syllabus Aims and Assessment:**

The syllabus demands understanding of basic mathematical concepts and their applications, together with an ability to show this by clear expression and careful reasoning.

In the examination, importance will be attached to skills in algebraic manipulation and to numerical accuracy in calculations.

**Aims**

The course should enable students to:

- develop their mathematical knowledge and oral, written and practical skills in a manner which encourages confidence;
- read mathematics, and write and talk about the subject in a variety of ways;
- develop a feel for number, carry out calculations and understand the significance of the results obtained;
- apply mathematics in everyday situations and develop an understanding of the part which mathematics plays in the world around them;
- solve problems, present the solutions clearly, check and interpret the results;
- develop an understanding of mathematical principles;
- recognise when and how a situation may be represented mathematically, identify and interpret relevant factors and, where necessary, select an appropriate mathematical method to solve problems;
- use mathematics as a means of communication with emphasis on the use of clear expression;
- develop the abilities to reason logically, to classify, to generalise and to prove;
Assessment objectives:

The examination tests the ability of candidates to:

- recall, apply and interpret mathematical knowledge in the context of everyday situations;
- set out mathematical work, including the solution of problems, in a logical and clear form using appropriate symbols and terminology;
- organise, interpret and present information accurately in written, tabular, graphical and diagrammatic forms;
- perform calculations by suitable methods;
- use an electronic calculator;
- understand systems of measurement in everyday use and make use of them in the solution of problems;
- estimate, approximate and work to degrees of accuracy appropriate to the context;
- use mathematical and other instruments to measure and to draw to an acceptable degree of accuracy;
- recognise patterns and structures in a variety of situations and form generalisations;
- interpret, transform and make appropriate use of mathematical statements expressed in words or symbols;
- Interpret, use and present information in written, graphical, diagrammatic and tabular forms;
- Apply and interpret Mathematics in a variety of situations, including daily life;
- Formulate problems into mathematical terms, select, apply and communicate appropriate techniques of solution and interpret the solutions in terms of the problems.

<tbody>
<tr>
<td>Vectors</td>
<td>Students should be able to:</td>
</tr>
</tbody>
</table>
• describe a translation by using a vector represented by $\mathbf{AB}$ or $\mathbf{a}$;
• add vectors and multiply a vector by a scalar;
• calculate the magnitude of a vector as $\sqrt{x^2 + y^2}$. (Vectors will be printed as $\mathbf{AB}$ or $\mathbf{a}$ and their magnitudes denoted by modulus signs, e.g. $|\mathbf{AB}|$ or $|\mathbf{a}|$. In all their answers to questions candidates are expected to indicate $\mathbf{a}$ in some definite way, e.g. by an arrow or by underlining, thus $\mathbf{AB}$ or $\mathbf{a}$);
• represent vectors by directed line segments; use the sum and difference of two vectors to express given vectors in terms of two coplanar vectors; use position vectors.

Jun 12 Paper 12 Q13
Nov 12 Paper 21 Q11b
Nov 12 Paper 22 Q11b
Jun 13 Paper 12 Q5
Nov 12 Paper 12 Q22

*Cambridge O level Mathematics: Volume 2* has notes and practice questions on pages 286–300

Online:
Work on vectors:

BBC Bite size has work on simple vectors:
www.bbc.co.uk/schools/gcsebitesize/maths/geometry/

Don Steward has a starter activity based on a tangram to develop use of vector notation:
http://donsteward.blogspot.co.uk/2010/01/vectors.html

4024 past examination papers:
Jun 12 Paper 12 Q12
Jun 12 Paper 21 Q7
Jun 12 Paper 22 Q7
Nov 12 Paper 11 Q24
Nov 12 Paper 21 Q11
Nov 12 Paper 22 Q11
Students should be able to:
• use the following loci and the method of intersecting loci:
  (a) sets of points in two or three dimensions
    (i) which are at a given distance from a given point,
    (ii) which are at a given distance from a given straight line,
    (iii) which are equidistant from two given points;
  (b) sets of points in two dimensions which are equidistant from two given intersecting straight lines.

Learning Resources:

Cambridge O level Mathematics: Volume 1 has notes and practice questions on pages 187–196

Online:
Work on loci and transformations:

BBC Bite size has work on loci:
www.bbc.co.uk/schools/gcsebitesize/maths/geometry/

Other:
Chalk, string and a metre ruler could be used to mark out a locus.

4024 past examination papers:
Jun 21 Paper 12 Q8biii and 8biv
Jun 12 Paper 22 Q11b
Nov 12 Paper 11 Q26
Nov 12 Paper 12 Q27
Jun 13 Paper 11 Q15
Jun 13 Paper 12 Q12
Nov 13 Paper 12 Q24
Nov 13 Paper 21 Q2

Students should be able to:
• calculate the mean, median and mode for individual data and distinguish between the purposes for which they are used;
• construct and use cumulative frequency diagrams; estimate the median, percentiles, quartiles and interquartile range;
• calculate the mean for grouped data; identify the modal class from a grouped frequency distribution.

Learning Resources:

Cambridge O level Mathematics: Volume 2 has notes and practice questions on pages 356–366
Online:
Work on cumulative frequency at section 9.5: www.cimt.plymouth.ac.uk/projects/mepres/allgcse/bkb9.pdf

BBC Bitesize has work on cumulative frequency: www.bbc.co.uk/schools/gcsebitesize/maths/statistics

Mathematics teacher K Pitchford describes an unusual (but effective) method for teaching quartiles: http://mathssandpit.co.uk/blog/?p=1145

Olympic weights – a handling data rich task from mathematics teacher Adam Briggs that involves cumulative frequency and also box and whisker diagrams: www.ncetm.org.uk/public/files/411886/Olympic+Weights+-+A+Handling+Data+Rich+Task.doc

Other:
Learners own data from previous statistics work could be used.

Nov 13 Paper 21 Q11
Assessment and Home Work

Students will be assessed by taking test of each and every chapter. Home Work shall be given on a daily basis.

Mathematical Notations:

The list which follows summarizes the notation used

Set Notation

∈            is an element of
∉            is not an element of
{x₁, x₂,...}  the set with elements x₁, x₂,...
{x: ...}     the set of all x such that...
n(A)          the number of elements in set A
∅             the empty set
ε             universal set
A´             the complement of the set A
N             the set of positive integers, {1, 2, 3,...}
z             the set of integers {0, ± 1, ± 2, ± 3,...}
Z+             the set of positive integers {1, 2, 3,...}
Q             the set of rational numbers
Q+             the set of positive rational numbers, {x ∈ ℚ: x > 0}
R             the set of real numbers
R+             the set of positive real numbers {x ∈ ℜ: x > 0}
⊆             is a subset of
⊂             is a proper subset of
⊈             is not a subset of
⊄             is not a proper subset of
∪             union
∩             intersection
[a, b]         the closed interval {x ∈ ℜ: a ≤ x ≤ b}
(a, b)         the interval {x ∈ ℜ: a ≤ x < b}

Mathematical Symbols

=             is equal to
≠             is not equal to
≡             is identical to or is congruent to
≈             is approximately equal to
<; <<         is less than, is much less than
<             is less than or equal to
>; >>         is greater than, is much greater than
>             is greater than or equal to
∞             infinity

Operations

a + b          a plus b
a – b          a minus b
a × b, ab, a.b a multiplied by b
a ÷ b, a/b, a/b b a divided by b

Functions

f             function f
f(x)           the value of the function f at x
f : A \to B \quad \text{f is a function under which each element of set A has an image in set B}

f : x \to a \quad \text{y the function f maps the element x to the element y}

f^{-1} \quad \text{the inverse of the function f}

\sin, \cos, \tan, 
\cosec, \sec, \cot \quad \text{the circular functions}

\sin^{-1}, \cos^{-1}, \tan^{-1}, 
\cosec^{-1}, \sec^{-1}, \cot^{-1} \quad \text{the inverse circular relations}

\textbf{Matrices}

\mathbf{M} \quad \text{a matrix M}

\mathbf{M}^{-1} \quad \text{the inverse of the square matrix M}

\det \mathbf{M} \quad \text{the determinant of the square matrix M}

\textbf{Vectors}

\mathbf{a} \quad \text{the vector a}

\mathbf{AB} \quad \text{the vector represented in magnitude and direction by the directed line segment AB}

| \mathbf{a} | \quad \text{the magnitude of a}

| \mathbf{AB} | \quad \text{the magnitude of AB}

\textbf{Probability and Statistics}

A, B, C etc. \quad \text{events}

A \cup B \quad \text{union of events A and B}

A \cap B \quad \text{intersection of the events A and B}

P(A) \quad \text{probability of the event A}

A' \quad \text{complement of the event A, the event ‘not A’}

P(A | B) \quad \text{probability of the event A given the event B}

X, Y, R, etc. \quad \text{random variables}

x, y, r, etc. \quad \text{values of the random variables X, Y, R, etc.}

x_1, x_2, ... \quad \text{observations}

f_1, f_2, ... \quad \text{frequencies with which the observations x_1, x_2, ... occur}
