Books:

Introduction
This syllabus provides a comprehensive set of progressive learning objectives for mathematics. The objectives detail what the learner should know or what they should be able to do in each year of education. The learning objectives provide a structure for teaching and learning and a reference against which learners’ ability and understanding can be checked.
This syllabus designed to promote continuity, coherence and progression within the study of Mathematics. The syllabus builds on the knowledge, understanding and skills developed within the Key Stage of Study for Mathematics.
This syllabus has been designed to meet the requirements of the GCSE regulations.
In studying a course based on this specification, students should be encouraged to make appropriate use of Information and Communications Technology (ICT), for example, spreadsheets and databases.
It has been designed to be as free as possible from ethnic, gender, religious, political or other forms of bias.

Cambridge O level Mathematics (Syllabus D) Syllabus Code 4024

Assessment:
All candidates take two papers.
Each paper may contain questions on any part of the syllabus and questions will not necessarily be restricted to a single topic.

<table>
<thead>
<tr>
<th>Paper 1</th>
<th>2 hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper 1 has approximately 25 short answer questions.</td>
<td></td>
</tr>
<tr>
<td>Candidates should show all working in the spaces provided on the question paper. Omission of essential working will result in loss of marks.</td>
<td></td>
</tr>
<tr>
<td>No calculators are allowed for this paper. 80 marks weighted at 50% of the total</td>
<td></td>
</tr>
<tr>
<td>80 marks</td>
<td></td>
</tr>
<tr>
<td>This paper will be weighted at 50% of the total qualification.</td>
<td></td>
</tr>
<tr>
<td><strong>Paper 2</strong></td>
<td><strong>2 hours 30 minutes</strong></td>
</tr>
<tr>
<td>-------------------------------------------------</td>
<td>------------------------</td>
</tr>
<tr>
<td>Paper 2 has approximately 11 structured questions.</td>
<td></td>
</tr>
<tr>
<td>Candidates should answer all questions.</td>
<td></td>
</tr>
<tr>
<td>Electronic calculators may be used and candidates should have access to a calculator for this paper.</td>
<td></td>
</tr>
<tr>
<td>Candidates should show all working in the spaces provided on the question paper. Essential working</td>
<td></td>
</tr>
<tr>
<td>100 marks</td>
<td></td>
</tr>
<tr>
<td>This paper will be weighted at 50% of the total qualification.</td>
<td></td>
</tr>
</tbody>
</table>
Assessment at a Glance

Calculating aids:

<table>
<thead>
<tr>
<th>Paper 1 – the use of all calculating aids is prohibited.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper 2 – all candidates should have a silent electronic calculator. A scientific calculator with trigonometric functions is strongly recommended.</td>
</tr>
<tr>
<td>Unless stated otherwise within an individual question, three figure accuracy will be required. This means that four figure accuracy should be shown throughout the working, including cases where answers are used in subsequent parts of the question. Premature approximation will be penalised, where appropriate.</td>
</tr>
<tr>
<td>In Paper 2, candidates with suitable calculators are encouraged to use the value of ( \pi ) from their calculators.</td>
</tr>
<tr>
<td>The value of ( \pi ) will be given as 3.142 to 3 decimal places for use by other candidates. This value will be given on the front page of the question paper only.</td>
</tr>
</tbody>
</table>

Units

SI units will be used in questions involving mass and measures: the use of the centimetre will continue. Both the 12-hour clock and the 24-hour clock may be used for quoting times of the day. In the 24-hour clock, for example, 3.15 a.m. will be denoted by 03 15; 3.15 p.m. by 15 15, noon by 12 00 and midnight by 24 00.

Students will be expected to be familiar with the solidus notation for the expression of compound units, e.g. 5 cm/s for 5 centimetres per second, 13.6 g/cm\(^3\) for 13.6 grams per cubic centimetre.

Mathematical Instruments

Apart from the usual mathematical instruments, candidates may use flexi curves in this examination.

Syllabus Aims and Assessment:

The syllabus demands understanding of basic mathematical concepts and their applications, together with an ability to show this by clear expression and careful reasoning.

In the examination, importance will be attached to skills in algebraic manipulation and to numerical accuracy in calculations.

Aims

The course should enable students to:

- develop their mathematical knowledge and oral, written and practical skills in a manner which encourages confidence;
- read mathematics, and write and talk about the subject in a variety of ways;
- develop a feel for number, carry out calculations and understand the significance of the results obtained;
- apply mathematics in every day situations and develop an understanding of the part which mathematics plays in the world around them;
- solve problems, present the solutions clearly, check and interpret the results;
- develop an understanding of mathematical principles;
- recognise when and how a situation may be represented mathematically, identify and interpret relevant factors and, where necessary, select an appropriate mathematical method to solve problems;
- use mathematics as a means of communication with emphasis on the use of clear expression;
- develop the abilities to reason logically, to classify, to generalise and to prove;
Assessment objectives:

The examination tests the ability of candidates to:

- recall, apply and interpret mathematical knowledge in the context of everyday situations;
- set out mathematical work, including the solution of problems, in a logical and clear form using appropriate symbols and terminology;
- organise, interpret and present information accurately in written, tabular, graphical and diagrammatic forms;
- perform calculations by suitable methods;
- use an electronic calculator;
- understand systems of measurement in everyday use and make use of them in the solution of problems;
- estimate, approximate and work to degrees of accuracy appropriate to the context;
- use mathematical and other instruments to measure and to draw to an acceptable degree of accuracy;
- recognise patterns and structures in a variety of situations and form generalisations;
- interpret, transform and make appropriate use of mathematical statements expressed in words or symbols;
- Interpret, use and present information in written, graphical, diagrammatic and tabular forms;

| August | Trigonometric Ratios  
  Book 3, Chap No.10  
  Pg No.(261-288) | **Students should be able to:**  
  - Define the three basic trigonometrical ratios in terms of the lengths of the hypotenuse side, opposite side and adjacent side with respect to an acute angle of a right-angled triangle.  
  - Find the value of a trigonometrical ratio using a calculator.  
  - Find the length of a side of a right-angled triangle using trigonometrical ratios.  
  - Find the value of an angle of a right-angled triangle using trigonometrical ratios.  
  - Solve problems involving angles and lengths of a right-angled triangle.  
  - Solve practical everyday life problems using trigonometrical ratios  
  - Solve trigonometrical problems in two dimensions including those involving angles of elevation and depression and bearings;  
  - Locate the position of a coordinate point on a graph and find the length of a line segment.  
  - Find the gradient of a line joining two given points.  
  - Find the equation of a straight line given its gradient m and one point on the line.  
  - Find the equation of a straight line joining two given points. | E.g. find the equation of a line parallel to \( y = 4x - 1 \) that passes through \((0, -3)\).  
E.g. find the gradient of a line perpendicular to \( y = 3x + 1 \).  
E.g. find the equation of a line perpendicular to one passing through the coordinates \((1, 3)\) and \((-2, -9)\) |
SEPTEMBER

Mensuration
- Book 3, Chap No.12
  Pg No.(335-358)

Matrices
  Addendum, Chap No.3

<th>Notes/Examples</th>
</tr>
</thead>
</table>
| September | Mensuration Book 3, Chap No.12 Pg No.(335-358) | - Find the area and circumference of a circle, a quadrant and a semi-circle.  
  - Find the length and area of a sector.  
  - solve problems involving  
    (i) the perimeter and area of a rectangle and triangle,  
    (ii) the circumference and area of a circle,  
    (iii) the area of a parallelogram and a trapezium,  
    (iv) the surface area and volume of a cuboids, cylinder, prism, sphere, pyramid and cone (formulae will be given for the sphere, pyramid and cone),  
    (v) arc length and sector area as fractions of the circumference and area of a circle.  

  Students should be able to:  
  - display information in the form of a matrix of any order;  
  - solve problems involving the calculation of the sum and product (where appropriate) of two matrices, and interpret the results;  
  - calculate the product of a scalar quantity and a matrix;  
  - use the algebra of $2 \times 2$ matrices including the zero and identity $2 \times 2$ matrices;  
  - calculate the determinant and inverse of a non-singular matrix.  
(A$^{-1}$ denotes the inverse of A.) | Formulae will be given for the surface area and volume of the sphere, pyramid and cone. |
### OCTOBER

- **Linear graphs and their applications.**
  - Book3, Chap No. 7.
  - Pg No. (169-194)

- **Area and volume of similar figures.**
  - Book3, Chap No. 9.
  - Pg No. (239-256)

### April

**REVISION FOR FINAL EXAMS**

### May

**FINAL EXAMS**
Breadth of Study:

During the key stage, students should be taught the knowledge, skills and understanding through:
(a) activities that ensure they become familiar with, and confident using, standard procedures for the range of calculations appropriate to this level of study;
(b) solving familiar and unfamiliar problems in a range of numerical, algebraic and graphical contexts and in open-ended and closed form;
(c) using standard notations for decimals, fractions, percentages, ratio and indices;
(d) activities that show how algebra, as an extension of number using symbols, gives precise form to mathematical relationships and calculations;
(e) activities in which they progress from using definitions and short chains of reasoning to understanding and formulating proofs in algebra and geometry;
(f) a sequence of practical activities that address increasingly demanding statistical problems in which they draw inferences from data and consider the uses of statistics in society;

Assessment and Homework:

Students will be assessed by taking test of each and every chapter. Home Work shall be given on a daily basis.

Mathematical Notations:

The list which follows summarises the notation used

Mathematical Symbols

\[ = \] is equal to
\[ \neq \] is not equal to
\[ \equiv \] is identical to or is congruent to
\[ \approx \] is approximately equal to

Operations

\[ a + b \] \( a \) plus \( b \)
\[ a - b \] \( a \) minus \( b \)
\[ a \times b, \ ab, \ a.b \] \( a \) multiplied by \( b \)
\[ a \div b, \ a/ b \] \( a \) divided by \( b \)
Functions

\[ f \] function \( f \)

\[ f(x) \] the value of the function \( f \) at \( x \)

\( \sin, \cos, \tan, \cosec, \sec, \cot \) the circular functions
